Digital Dentures
Reimagine dentures.
Renew your smile.

Need dentures?

Maybe it's your first time and the stories you've heard make you nervous. Maybe you've been fitted before and dread going through it again:

Too many lengthy visits for try-ins, adjustments and possible remakes

Dentures that don't fit quite right, causing discomfort and limiting your food choices

Poor quality dentures that don't look natural

Imagine a better way.

+ Fewer appointments.

Typically, only four 30-minute visits are required, and digital means fewer adjustments after you receive your finished dentures.

+ A great fit.

The accuracy of digital technology delivers better-fitting dentures for improved retention and comfort.

+ Personal involvement.

You'll partner with your dentist to select the teeth shades and denture design that's right for you.

Precision technology. Predictable fit. Proven advantage.

Dentsply Sirona has brought a more precise way to create dentures that fit your mouth better, look more natural and perform reliably for years to come.

The old way. Your denture is made using 100-year-old practices that sometimes result in the denture shrinking or not fitting properly.

The new way. The digital method allows you to participate in selecting the teeth and shade that are right for you. Your dentures are made from a material that won't shrink, ensuring a more comfortable fit. You also have security in the form of a permanent digital record. If your dentures are damaged or lost, a replacement is just a phone call away.

Get a more accurate fit
with fewer appointments.

Enjoy a beautiful smile
with lasting comfort.
